PREMIUM mattresses – HOSPITAL KS + VISCO

Cold foam-visco mattress, total height: approx. 14 cm

The PREMIUM Hospital KS+VISCO mattress consist of a very elastic base layer made from cold foam and a top layer made of elastic visco foam with integrated edge reinforcement.

The specific composition of the visco foam means that the material yields even to slight pressure, so the sleeper's body can sink gently into the mattress. This forms a depression that perfectly moulds the contour of the sleeper's body. This increases the contact area, thus ensuring excellent pressure distribution and long-lasting relief on the joints and spine. This means that the whole body is wonderfully cared for and can recover from the strains of the day.

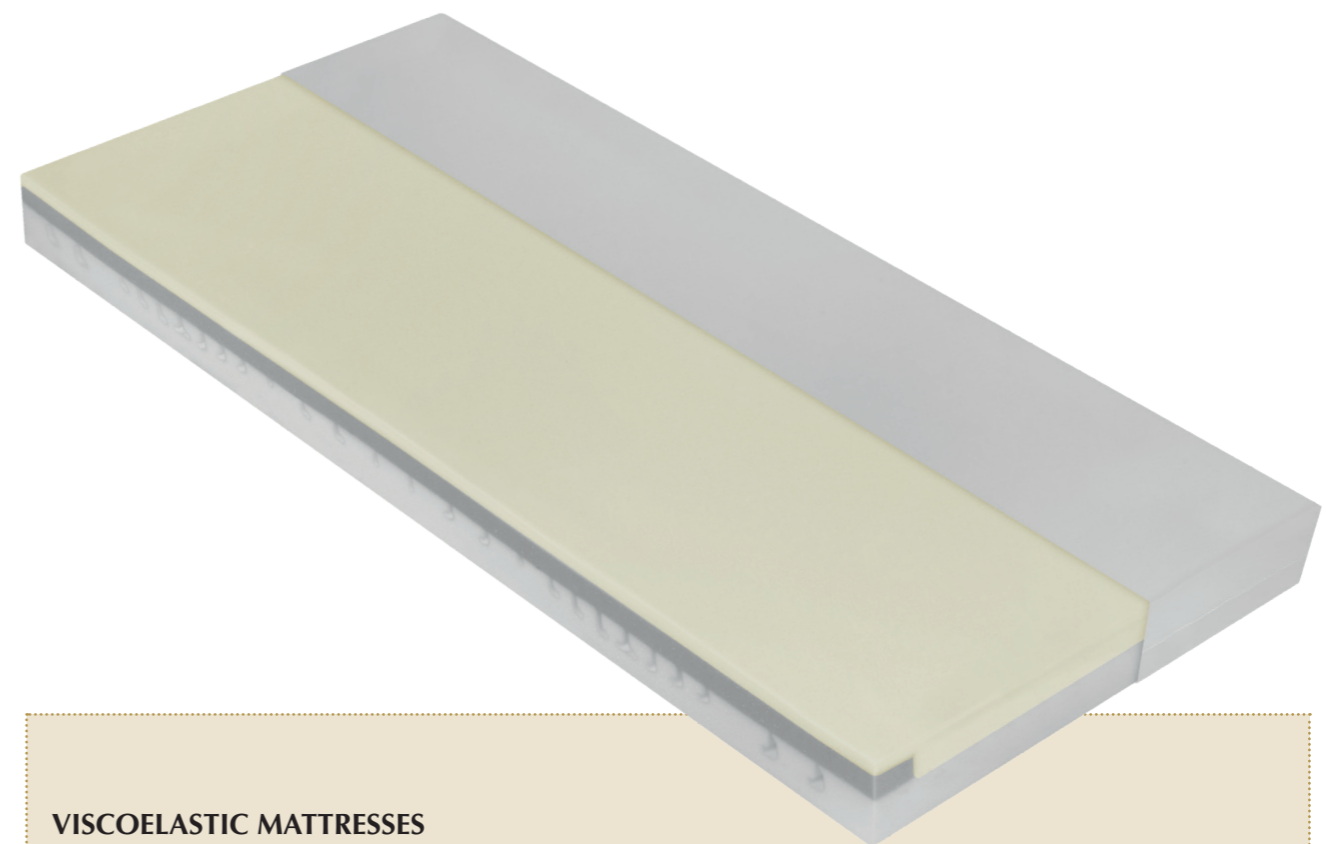

PREMIUM mattresses – HOSPITAL KS + VISCO

- Core** approx. 14 cm high core with a cold foam base, zone distribution and very elastic visco foam pad (density 50), including integrated edge reinforcement

VISCOELASTIC MATTRESSES

Viscoelastic mattresses are made from specialist PUR foam and have "load-bearing elasticity". This allows the body to sink pleasantly into the mattress. The mattress distinguishes itself brilliantly due to its pressure-distribution effect.
