CLASSIC mattresses – HOSPITAL KS

Cold foam mattress, total height: approx. 14 cm

The CLASSIC Hospital KS mattress consists of a very elastic base layer made from cold foam, surrounded on both sides by a polyurethane pad with integrated diagonal wave cut.

The special profile cut on the underside of the pads promotes the flow of air and reduces the build-up of moisture. This helps avoid skin irritations and reduces shear forces. The very elastic material lets the body sink in softly and ensures good pressure distribution and excellent resting comfort. The three-layer structure means that either side of the mattress can be used.

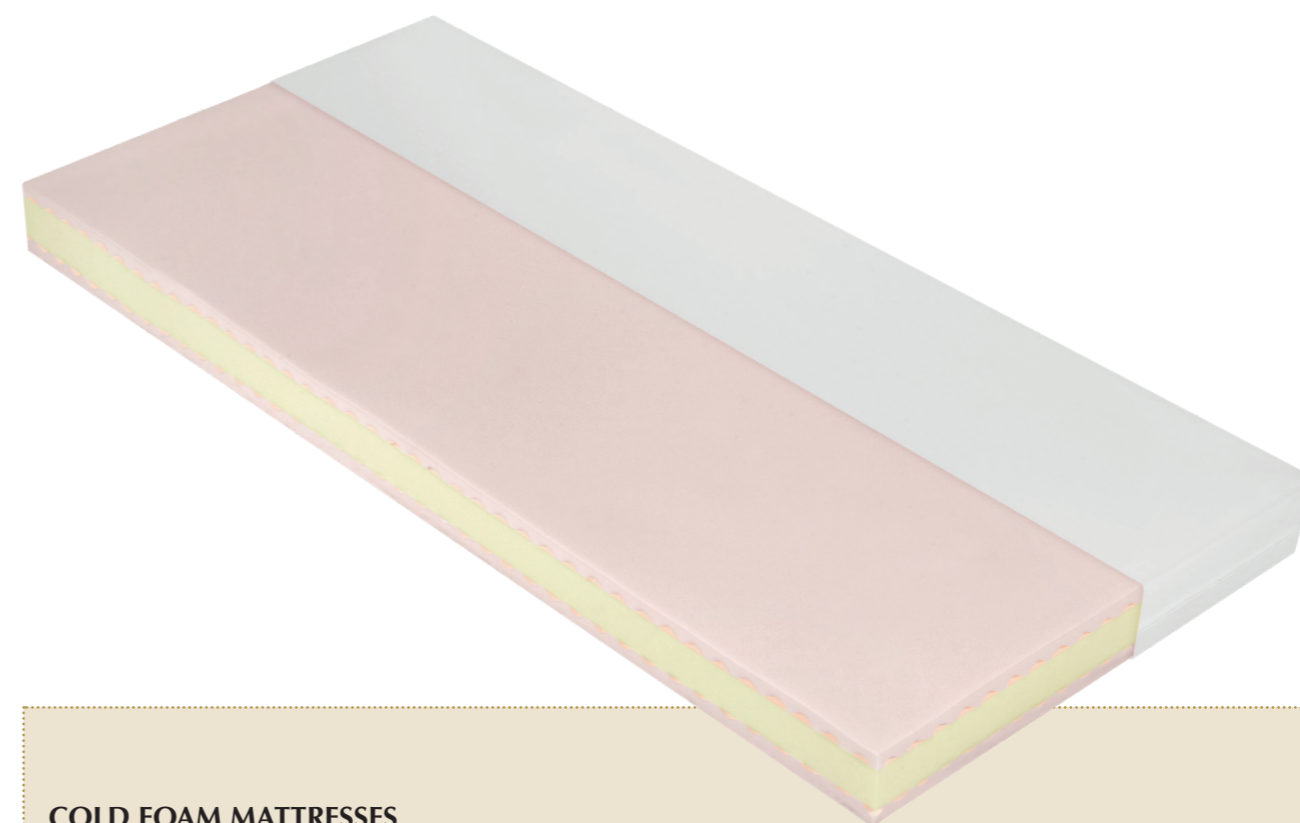

CLASSIC mattresses – HOSPITAL KS

- Core** approx. 14 cm high core with cold foam base, surrounded on each side by a pad (density 50) with integrated diagonal wave cut
- Casing** 100 % jersey lined with polyurethane, white, 180 g/m², with a covered three-sided zip, elastic, breathable, waterproof, can be disinfected, bacteria and virus-proof, fire-resistant as per BS 7175 1989 Crib5, high hydrolysis resistance
- Total height** approx. 14 cm

Product	Size in cm*	Art. no.
CLASSIC MATTRESS	90 x 200	99912
HOSPITAL KS	100 x 200	99913

COLD FOAM MATTRESSES

Cold foam mattresses are generally very flexible and have high point elasticity. A common criterion to judge their quality is their density. As a general rule, the higher the density, the more durable and higher quality the cold foam used.
