### BASIC mattresses – HOSPITAL PS

**Polyurethan foam mattress, total height: approx. 12 cm**

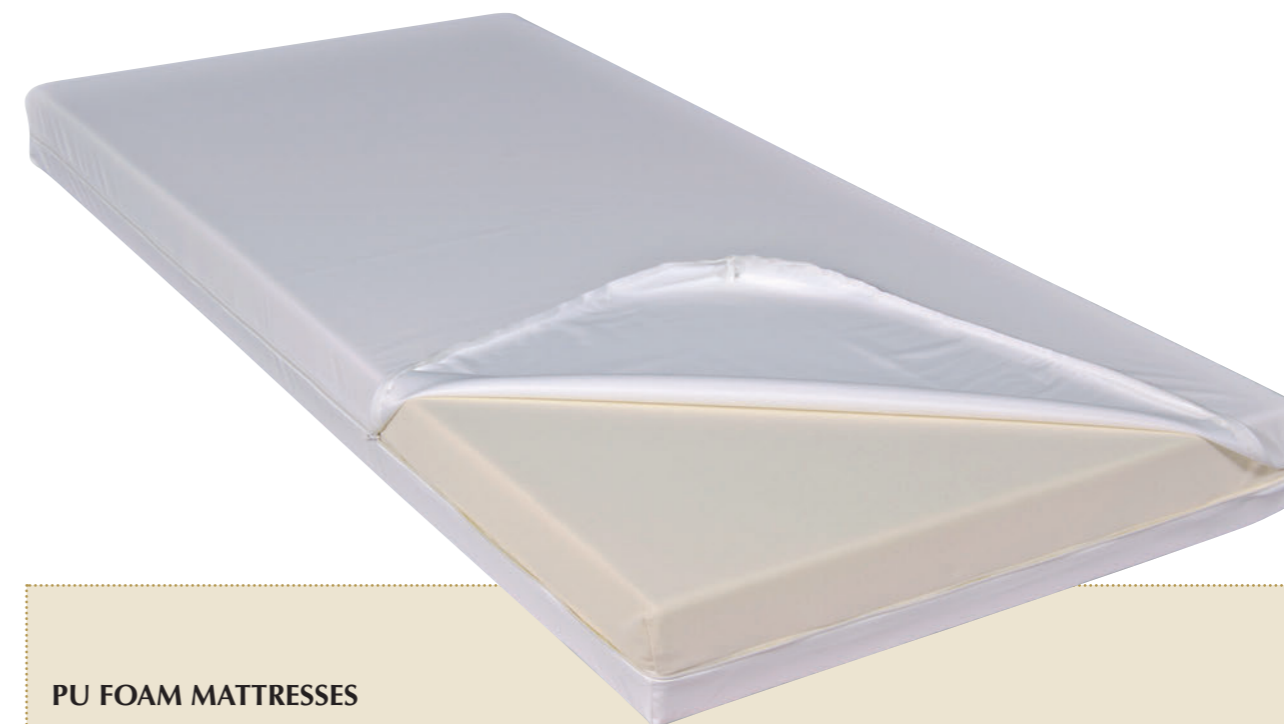

The BASIC HOSPITAL PS mattress consists of robust polyurethane foam. With its single-layer structure, this mattress can be used on either side. It offers a constant sleeping environment and is easy to handle. This makes it an all-purpose mattress.

### BASIC mattresses – HOSPITAL PS

- Core** approx. 12 cm high polyurethane foam core (density 38)

#### PU FOAM MATTRESSES

PU foam mattresses are generally very robust and durable. A common criterion to judge their quality is their density. As a general rule, the higher the density, the more durable and higher quality the PU foam used.
